

**StudyFlow is a smart study plan platform designed to help students easily organize and track their learning progress in an intuitive and engaging way.**

## **MAIN AIM:**

**It provides students with an easy-to-use visual tool to monitor their study progress, making the learning experience clearer, motivating, and enjoyable.**

# HOW DOES IT WORK?

1. **Track Your Exam Progress** – Check how much you've completed for each exam with an easy-to-read bar chart.
2. **Visualize Your Performance** – Quickly understand your progress with color-coded bars and percentage values.
3. **Plan Smarter** – Organize your study sessions efficiently and keep track of your goals.

# Why StudyFlow is Original?

## 1. Interactive Real-Time Charts

Few similar tools provide immediate visualization of progress through animated bars with visible percentages. Users can see at a glance where they are in their study plan without any calculations.

## 2. In the project, each “exam” represents a subject or test

that a student needs to complete. Users can (or in the future will be able to) add new exams to the dashboard, providing at least two key pieces of information:

Exam Name – e.g., “Mathematics” or “Physics”.

Exam Progress – how much of the exam has been completed, expressed as a percentage (0% to 100%).

This structure allows for a dynamic database that feeds the charts, so every time a new exam is added, the dashboard updates automatically.

## 3. User-Friendly and Readable Experience

The combination of animated title, consistent colors, clear text, and responsive layout makes StudyFlow accessible to all students, even those not used to complex digital tools.
